1. EXECUTIVE SUMMARY & ERDC LABORATORY ALIGNMENT

Humphrey Virtual Farms LLC (‘CAGE: 1AHA8‘ | ‘UEI: S1M4ENLHTDH5‘) submits this 5-page Executive Technical White Paper to the **U.S. Army Engineer Research and Development Center (ERDC)** targeting the **Geotechnical and Structures Laboratory (GSL)**, **Coastal and Hydraulics Laboratory (CHL)**, and **Information Technology Laboratory (ITL)** research areas.

Modern civil works, locks, dams, tactical airfields, and highway bridges face an acute dual vulnerability:
1. **Cloud-Dependent SCADA & Inspection Fragility:** Legacy infrastructure telemetry and automated inspection pipelines rely on commercial cloud APIs that fail under electromagnetic interference (EMI), rural bandwidth denial, or adversarial cyber-physical intrusion.
2. **Unverified Structural & Hydrological Sensor Provenance:** Field inspection data for concrete spalling, rebar corrosion (‘23 CFR Part 650‘), pavement condition indexing (‘ASTM D6433‘), and floodgate actuation lack deterministic, tamper-evident cryptographic provenance at the edge.

Project Ebony (v8.0.0) solves both vulnerabilities through an air-gapped, zero-cloud **Three-Brain Software Emulation Testbed (‘TRL 4‘)** operating at ‘100%‘ local loopback (‘127.0.0.1‘ | ‘0%‘ external cloud dependency), backed by **‘83 / 83‘

==========

passing automated unit and stress test suites**, **‘17 / 17‘ blocked adversarial red-team penetration vectors**, and **‘1,420‘ verified civil/structural engineering assessment modules** (‘STR-01‘, ‘PAV-01‘, ‘ENV-01‘, ‘AUT-01‘).

---

2. THREE-BRAIN ARCHITECTURAL SPECIFICATION (TRL 4 TESTBED)
Project Ebony partitions infrastructure monitoring and actuation into three mathematically isolated software domains:
* **Brain One -- Deterministic Safety & Actuation Interlock Engine:** Evaluates structural strain, hydraulic pressure, and microgrid phase telemetry against strict physical boundary invariants. Our SPICE/mathematical hardware model targets a **36.75-nanosecond (‘36.75ns‘)** physical analog MOSFET cutoff ("Kinetic Guillotine" at ‘28.5W‘ / ‘24V DC‘) to sever compromised actuation buses before kinetic damage occurs.
* **Brain Two -- Air-Gapped Structural & Pavement Diagnostic Engine (‘STR-01‘ / ‘PAV-01‘ / ‘ENV-01‘):** Processes non-destructive evaluation (NDE) bridge metrics, ultrasonic/thermal concrete defect classification, ASTM D6433 Pavement Condition Index (PCI) deductions, and hydraulic flow anomalies locally with zero internet connectivity.
* **Brain Three -- Bare-Metal SQLite WORM & SHA-256 Merkle DAG Vault:** Seals every sensor frame, inspection dossier, and operator command into an append-only Write-Once-Read-Many (WORM) cryptographic ledger (‘52‘ verified tables across ‘matrix_ledger.db‘ and ‘hvf_memory_vault.db‘).

---

3. EMPIRICAL TRL 4 SOFTWARE VERIFICATION METRICS
All claims in this white paper are backed by deterministic, reproducible software testbed execution on local air-gapped hardware:
* **Automated Test Suite Coverage:** ‘83 / 83‘ (‘100.0%‘) unit and stress test suites passing across ‘1,956‘ compiled Python modules (‘0‘ syntax errors).
* **Adversarial Zero-Trust Red-Team Harness:** ‘17 / 17‘ simulated license tampering, seat overflow, and unauthorized SCADA bus ingress vectors blocked with automatic multi-pass cryptographic zeroization.
* **Sovereign Field Academy Workforce Integration:** ‘1,420‘ unique verified engineering questions (‘800‘ Chapter 1 Milestone Qs across ‘40‘ units + ‘620‘ Chapter 5 State Exam Qs across ‘12‘ stages) training civil and defense operators on ‘23 CFR 650‘, ‘ASTM D6433‘, and ‘40 CFR 60 OOOOb‘.

---

4. PROPOSED 12-MONTH PHASE-1 RESEARCH & PROTOTYPE MILESTONE SCHEDULE ($1,200,000.00)
Humphrey Virtual Farms LLC proposes a **12-Month, $1,200,000.00** research and

==========

prototyping award (‘0%‘ cost share / ‘$0‘ cash match) structured across four payable milestones to advance Project Ebony from **TRL 4** (Laboratory Software Emulation) to **TRL 6/7** (Field-Hardened ERDC Demonstration):

Milestone	Deliverable Description	Timeline	Allocation
M1A: Kickoff & Mobilization	Hardware procurement (Ruggedized Edge Nodes, NDE Sensor Test Rig, Oscilloscope Bench) & ERDC GSL/ITL Interface Alignment	**Day 15-30**	**‘$150,000.00‘**
M2: TRL 5 Benchtop Integration	Physical PCB fabrication of the ‘36.75ns‘ Kinetic Guillotine interlock & HIL integration with simulated lock/dam/bridge sensors	**Month 4**	**‘$350,000.00‘**
M3: TRL 6 Field Emulation	Closed-loop NDE structural/pavement (‘STR-01‘/‘PAV-01‘) & hydrology (‘ENV-01‘) field trial with WORM Merkle DAG verification	**Month 8**	**‘$400,000.00‘**
M4: Final ERDC Dossier & Audit	Delivery of TRL 6/7 prototype package, NIST SP 800-171 / 800-82 verification report, and ISO 32000-1 WORM Technical Binder	**Month 12**	**‘$300,000.00‘**
TOTAL PROPOSED AWARD	**100% Non-Dilutive Federal R&D / Prototype Allocation (Zero Cash Match)**	**12 Months**	**‘$1,200,000.00‘**

==========
